

Hoses

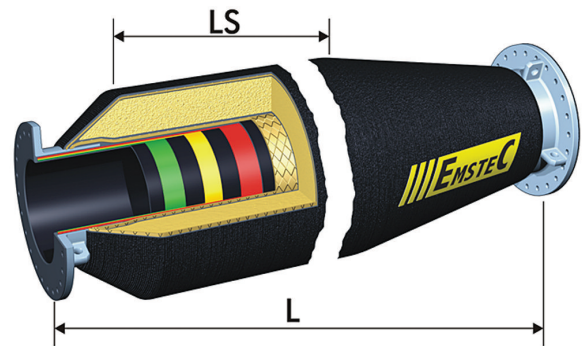

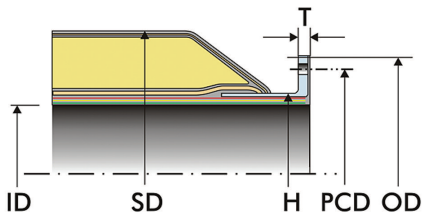

A 8

► Floating Hoses

Emstec Floating Hoses are available of different design criteria. In general the Floating Hoses are consisting of an inner discharge hose with build in steel nipples. A floatation body made out of a closed cell PE foam will be built around the entire hose. The floating body is

covered by a reinforced rubber shell suitable to withstand severe sea conditions as well as handling influences. Emstec floating hoses are available as mainline, special reinforced mooring, tapered connecting hose and other designs.

► **Part No.: 131144 Floating Hose with vulcanized in steel nipple** Special Type Hopper Connection Hose

► **Part No.: 131344 Floating Hose with vulcanized in steel nipple** Main Line Hose
